

Deliverable D.4.2 Databases based on standardized, comparable data formats - Documentation is now available. This report complements the historic database at the national level for nine countries, Albania, Austria, Germany, Italy, the Netherlands, Romania, Sweden, United Kingdom and Denmark, established in Volante WP4 - Long term land-system dynamics. It represents an accompanying document, presenting main data sources, description of methods, technical description of the database, and some illustrative results. The database provides the empirical body and basis data for two remaining deliverables in Volante: D4.4 Report on country-level analyses and D4.5 Report on comparative analysis.
